

# Daikin Altherma Hybrid Heat Pump

For the best of both worlds in heating technology

# The most efficient

## new heating solution for your home

### Daikin Altherma Hybrid Heat Pump

the most advanced way to replace your gas boiler

There's now a more energy-efficient and cost effective alternative when you need to replace your old gas boiler.

The market leading **Daikin Altherma range** offers the most innovative smart technology system for your heating and hot water.

The new **Hybrid heating system** combines the familiarity of a gas combi boiler with the added efficiency of a renewable energy heat pump to give you the best of both worlds.

This unique system is fitted as a single compact indoor unit and separate outdoor unit without the need to change your pipework or radiators.

### Peace of mind

- ✓ Automatically selects the most energy-efficient operation, year-round
- ✓ No-hassle fast installation
- ✓ "Two-in-one" heating system for total peace of mind
- ✓ Minimises impact of energy price rises
- ✓ Industry-leading 3-year parts and labour warranty
- ✓ This system is eligible for the Renewable Heating Incentive, which contributes to the cost of installation.

# 3 important benefits for you

## 1. Maximum energy-efficiency, minimised running costs

The Hybrid system constantly monitors and selects the most cost-efficient mode for every operating condition. It chooses between electric heat pump and gas boiler operation – or a combination of both.

### Up to 35% more efficient for space heating

- The smart hybrid control logic automatically selects the most energy-efficient and cost-effective operation for the outdoor temperature and heating demand, based on your energy tariffs
- It maximises the use of the heat pump so that gas consumption is reduced – and you save money

### Higher efficiency for domestic hot water

- Provides instantaneous hot water from the combi boiler – so it's ideal for homes with a single bathroom
- Optional hot water cylinder available\* for homes with higher hot water demand
- The system can also be connected to a solar thermal system\* to further reduce heating costs

## 2. Keep your radiators

- The system connects directly to existing pipe work and radiators, minimising disruption
- If your old boiler has broken down, the new system can be up and running even before the heat pump has been commissioned, so your heating can be restored quickly.

## 3. Compact and space saving

- The single indoor hybrid unit is designed to minimise space requirements and fit in the same space as your old wall-hung boiler

\*From Summer 2014

### ✱ Did you know that...

the Daikin Altherma Hybrid Heat Pump combines an efficient domestic hot water combi boiler with a special 2-in-1 heat exchanger for both space heating and domestic hot water heating.
